MY Documents
A Secured File Portal to Your World

MYTrueCloud
Going to New Heights

Business runs on information being shared between parties – clients, customer, vendors, and partners. The good news is more information than ever can be sent via the internet for effective and efficient transfer of documentation and data. However, concerns regarding data security and a secure IT Cloud Environment are still the #1 issue on people's minds. We have all read about situations where large corporations and even government agencies have had encrypted data and documents stolen by sophisticated hackers. Nothing is 100% secure, but MY Documents is the only File Sharing solution to use 2-Factor Authentication SSL/VPN providing a strong security layer in addition to encryption.

Does your business send or receive sensitive files with credit card information, social security numbers, financial accounts/information, or other company confidential information? If so, MY Documents provides your business with a secured file portal that shows you are taking Data Privacy to the Next Level – a powerful message to the market.

The Paperless Environment in Support of True Collaboration

> ➤ *Advanced Forensic Monitoring*- Real time tracking on all activities and versioning on all documents

> ➤ *Advance Drag and Drop* - Sync files to special folders and sync folders to specific computers and people for seamless collaboration

> ➤ *Advanced Permission Setting* – Allow establishment of individual resource access criteria
